

## ABSTRACT

A drug dispenser which can easily align drugs when filling it with the drugs. In a drug dispenser in which a lowermost drug of a plurality of drugs (100) stacked in a vertical direction and contained in a drug case (1) is pushed out in a horizontal direction to dispense it, a door (7) is provided on the front surface of the drug case (1). A drug aligning device (second door 11) is provided on the inner surface of the door (7), the drug aligning device pushes the front ends of the plurality of drugs (100) contained in the drug case (1) to align the rear ends thereof when the door (7) is closed.
